Re: Opposing the revising of Federal requirements for labeling foods exposed to radiation.

I object vehemently to your absurd proposal to eliminate labelling for foods that are irradiated! You must not stop the proper labelling because we, the public, have the right to know if our food is being adulterated by high intensity gamma radiation that depletes radiation sensitive essential nutrients like B₁, B₂, B₃, B₆, B₁₂, folic acid, Vit C, Vit E, Vit K and the essential fatty acids. How can you justify your "truth in labelling laws" for supplements and not label irradiated, adulterated food?! It is absurd, perhaps unconstitutional and I have every intention to sue the FDA if this legislation is illegally pushed into law.

Sincerely,

98N 1038

 BRUCE HEINDEL, D.C., Ph.D.
